Subject: Axle Label Change

We are making a running change to the one-part perforated label currently being affixed to each axle. The new label will have two parts. The full label will be attached to the axle tube like before. The bottom label is affixed on top of the full label and needs to be peeled off and placed on the inside cover of the Operation Maintenance Service Manual to be included with each trailer.

The bottom section will still contain the serial number of the axle, Dexter part number if available, capacity of the axle, hub face (HF) and spring center (SC), or outside of bracket (OB) if it is a Torflex axle. This information as before, will be helpful to the end user when needing replacement parts for their axle. Below are examples of the new two-part label.

Please contact your Dexter sales engineer if you have additional questions or need further assistance.
