Subject: Changes in Disc Brake Service Kits

Dexter is pleased to introduce disc brake service kits that will include only the disc brake pads used in Dexter's single piston disc brake offering once found in the legacy brands of Titan and UFP. The following kits will be obsoleted that included both disc brake pads and caliper rebuild components. Individual disc brake caliper rebuild components will no longer be available and are included in caliper replacement kits. These new disc brake pad kits will service one axle.

Please refer to the charts below for part numbers and descriptions for both discontinued and new disc brake service kits.
